Being GREEN used to mean you needed more practice. But now GREEN means you're smart.

With the new series of LED Lights from LUMAHAWK, you'll immediately conserve electricity and become more environmentally-friendly. Since all LUMAHAWK LED lights require only 12-volts to be fully-powered, yet deliver up to a maximum of 1,000 watts of studio-equivalent strobe lighting, other photographers will be green with envy!

LIGHT-EMITTING-DIODES for Bright, Even-Lighting

Low-voltage is only the first start in bringing bright, crisp, even illumination to your next studio-shoot. In fact, you may even want to show-off your new 'studio' lighting outside the studio. Thanks to LUMAHAWK's LED 12-volt-series, it's easy to balance even the most difficult of lighting scenarios. Built-in barn-doors on select models, allow you to precisely direct your fill-lights while you adjust your main light and reflectors for proper exposure.
